Spain

Citrus

Annual

2006

Approved by:

Stephen Hammond
U.S. Embassy

Prepared by:

Leonor Ramos

Report Highlights:

The European Commission (EC) is thought to be about ready to deploy a new set of policy tools, including the application of a subsidy decoupling, to the fruit sector. Spanish citrus fruit producers, apparently supported by the Government of Spain (GOS), are in favor of certain improvements to the EC financing of producer organizations, but don't appear ready to support decoupling of the fruit-processing sector.

Executive Summary

Spanish citrus producers could continue to expand area planted as a result of the reform of the Common Agricultural Policy (CAP). The EC cotton reform, as part of the overall CAP reform, has been delayed by a successful GOS challenge of the reform. However, pending a court-required review, by the EC, of the potential economic consequences of the cotton reform, most here in Spain believe that the reform, will be re-implemented. As that occurs, it may become more lucrative for current Spanish cotton producers to convert their irrigated lands to citrus production. The land appears well suited for citrus production, so if the economic incentives appear sufficient, and the reform of the common fruit sector is appealing, farmers may make the rather substantial investment necessary to convert to citrus production.

Spanish exports of fresh sweet oranges, tangerines and orange juice will likely reach the following levels during marketing year (MY) 2006 (November/October,) thousand metric tons (TMT), with MY 2005 in brackets:

- Fresh sweet oranges, 1,400 (1,290);
- Fresh tangerines, 1,500 (1,440); and,
- Orange juice, 65 degrees Brix, 116 (111).

Production

- Spanish 2006/07 fresh orange production will be up significantly from previous year levels, profiting from improved weather conditions relative to a drought in 2005.
- Spanish producers continue to expand orchards. Most of the new orchards are located in the *Andalucia* region, where the industry has recently carried out new investments in juice processing capacity.
- The CAP reform will also contribute to a potential increase in citrus acreage at the expense of cotton production. There are some 92,000 ha of cotton under irrigation, which are suitable for citrus production. Most popular varieties in new areas will tend to be Lanelate and Navelate.
- Production data in PSD Table above is obtained from the Spanish Ministry of Agriculture (MAPA).
- For fresh orange production data series from 2000/01 to 2006/07, and for expression of key varieties in total orange areas, check table at the end of section.

Policy

- The EU citrus sector benefits from support measures under the EU Common Fruit and Vegetables policy. Producers are eligible to receive EC-established processing subsidies. For a summary of measures currently in effect, please check table below.
- The EC is currently working on the reform of the EU Fruit and Vegetables policy, which should be completed during the second semester of CY-2006. We expect the reform will encourage production by the most competitive farmers if the EC opts for some degree of subsidy decoupling. As a result, fresh orange production will likely continue to expand, including into areas now cultivated by cotton farmers.
- In order to eradicate the Mediterranean fruit fly, Valencia Regional Autonomous officials has implemented a new pest control system during the 2006 crop year. This will enhance Spain's ability to export citrus fruit free of fruit-fly larvae (for more details, please check SP5029).
- Spanish authorities and the local citrus industry carry out regular marketing activities to promote consumption of Spanish citrus fruit domestically, as well as in other EU and non-EU countries. These programs are co-financed by the EU, central and regional governments, and private industry. During 2004/05, these program represented some € 8 Million, of which part were spent promoting Spanish clementines in Atlanta, Saint Louis, Charlotte, Houston and Dallas.

Citrus Production: EU-set Production Thresholds and Processing Subsidies in Effect

	Orange	Lemon	Grapefruit	Small Citrus Fruit
Spanish Production Thresholds (MT)	600,467	192,198	1,919	270,186
EU Production Thresholds	1,500,236	510,600	6,000	384,000
	Producer Processing Subsidies (€/100 kg) (*)			
Annual Contract	9.8	9.10		
Multi-year Contract	11.27	10.47		
Individual Producers	8.82	8.19		

(*) Full subsidies. Due to exceeding the quota in 2003/04, Spanish grapefruit producers were penalized in 2004/05. Subsidies received by local grapefruit producers for single year or multi-year contracts, or by individual producers in 2004/05 were reduced to 7.6, 8.75 and 6.84 €/100 kg delivered product respectively.

Production

- Fresh lemons production data in the PSD Table is official MAPA information.
- Producers are opting for the Fino lemon variety, displacing the more traditional Verna variety in an effort to remain competitive with South America producers.
- For Spanish total area and output series from 2000/01 to 2006/07, please check table below. For CY-2003 area breakdown by most significant varieties, please check table at the end of this section.

Production

- Spanish 2006/07 orange juice production will be higher than in 2005/06, as a consequence of the higher 2006/07 fresh orange harvest.
- Domestic orange juice production should be up over the medium-term as fresh orange production expands (see Fresh Orange section).

Trade

General

- Spanish MY 2006/07 orange juice exports will recover from unusual low 2005/06 levels, due to an increase in juice availability.
- Trade data given in this report for 2004/05 comprises the following harmonized tariff schedule code numbers: 2009.11, 2009.12, 2009.19. We utilized data from the Spanish Customs. All data was converted to 65 percent Brix.
